

# IT Technology Trends – Survey Report

Klims Lavriks

January, 2021

# OUTLINE

---

- Executive Summary
- Introduction
- Methodology
- Results
  - Visualization – Charts
  - Dashboard
- Discussion
  - Findings & Implications
- Conclusion
- Appendix

# EXECUTIVE SUMMARY

---

- IT technology trends keep changing with astronomical pace
- Day-to-day evolving modern technology forces the revolution in programming languages and databases towards operation with more complex data and pushing processing times to their narrowest limits
  - Web-based programming languages such as JavaScript and HTML retain to be the most popular among developers now and in near future
  - Python considered as fastest growing language mainly owing to its wide functionality and programming syntax simplicity
  - PostgreSQL is top-preferred database for next year
  - No-SQL databases marginally grow in popularity as well, allowing users to query their data without having to learn and master SQL
  - Docker will be most preferred platform by overtaking both Linux and Windows
- The use of commercial databases predicted to be outlived in future with MySQL Server losing its rankings to multiple open-source competitors

# INTRODUCTION

---

- The survey report represents key findings in current and future trends in IT technology
- It provides interactive summary statistics on top trending programming languages, databases, platforms and web frames, which will be of interest as to IT developers, so and to all business professionals who wishes to improve awareness of current trends in this field
- High-level summaries of average salaries and job postings outline important perspectives for those, who seek linking their professional career with programming
- Gathered characteristics of survey respondents provide an insight into most common gender, age, country origin and University degree of an IT developer

# METHODOLOGY

---

- Original data comes from survey conducted by Stack Overflow company
- The data is cleansed, normalised and modified to a subset that covers 11,4K unique respondent replies
- The survey data was gathered in IBM Watson Studio and analysed through Python Notebooks.
- The report visualisation was handled by Cognos Dashboard Embedded (CDE) in IBM Cloud
  - Supporting data about job postings was collected by using GitHub API from the following link: <https://jobs.github.com/api>
  - Supporting data on popular programming languages was collected by using web scraping method from the following link: [https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-DA0321EN-SkillsNetwork/labs/datasets/Programming\\_Languages.html](https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-DA0321EN-SkillsNetwork/labs/datasets/Programming_Languages.html)

# RESULTS

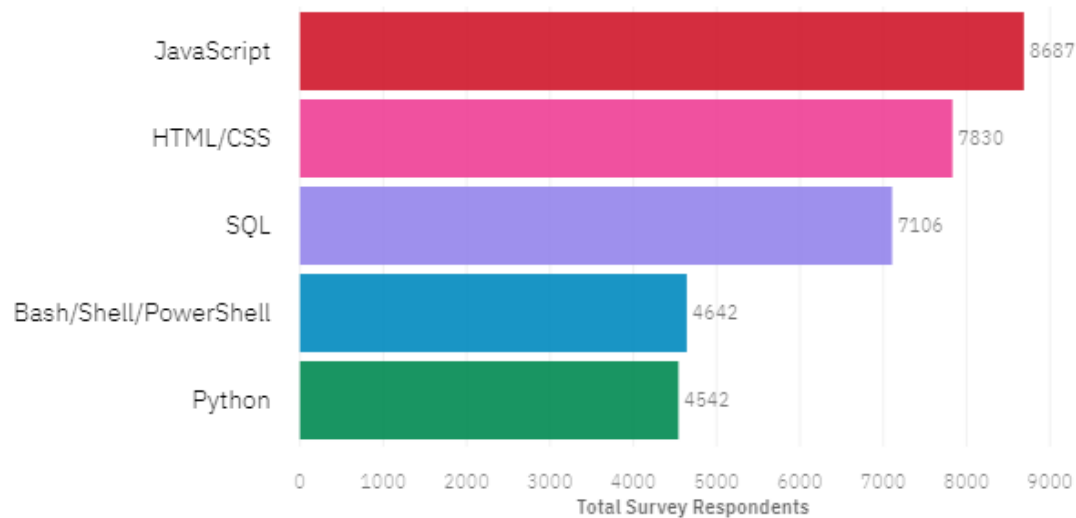

---

# PROGRAMMING LANGUAGE TRENDS

Current Year

Top 5 Programming Languages

Next Year

Top 5 Programming Languages

# PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

---

## Findings

- Java Script remains most used programming language amongst developers
- Python has growing popularity and is expected to overtake SQL
- In contrast, Shell programming languages face downward trend in usage and won't be in top 5 next year

## Implications

- Top 2 positions taken by JavaScript and HTML suggests that web development continues to be the most popular engineering environment
- Growth in Python's popularity points to its "general attractiveness" for new generation of developers, whis is supported by its wide spectrum of functionality and ease of coding
- SQL doesn't drop much in popularity due to its simplicity and effectiveness in work with relational databases.

# DATABASE TRENDS

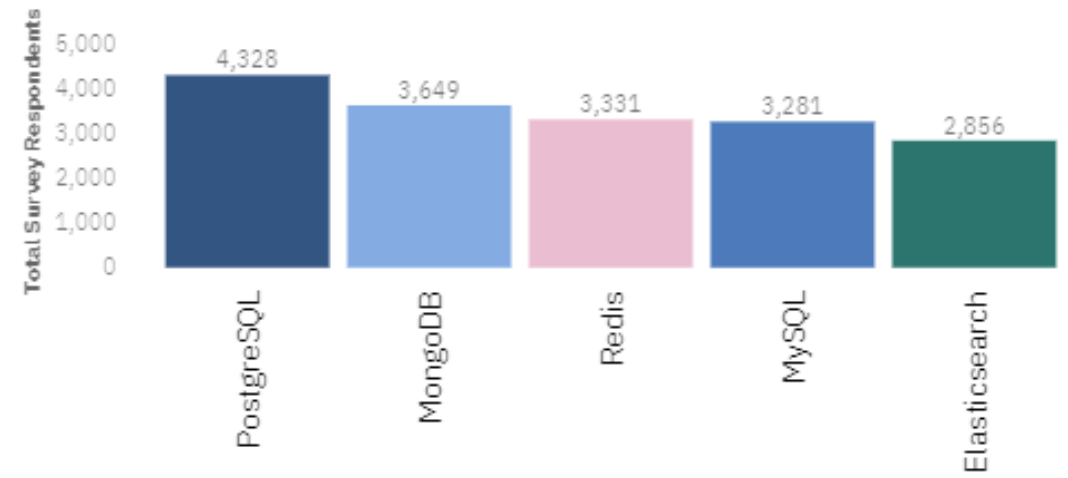

Current Year

Top 5 Databases

Next Year

Top 5 Databases

# DATABASE TRENDS - FINDINGS & IMPLICATIONS

---

## Findings

- From charts in previous slide a significant turnaround can be observed in database preferences
- MySQL being top used database drops to 4th place losing its original top ranking to PostgreSQL
- NoSQL MongoDB and Redis are significantly gaining in popularity also
- Microsoft SQL Server is likely to disappear completely from top 5 next year

## Implications

- With Microsoft SQL Server dropping out of top 5 from original 2nd place, the demand for open-source database in future is undisputable
- PostgreSQL is projected to be the most popular database amongst developers. No surprise, it is considered the most advanced and powerful SQL compliant and open-source objective-RDBMS
- The growing need for dealing with more complex, unstructured data pushes NoSQL databases to leading positions also

# DASHBOARD

---

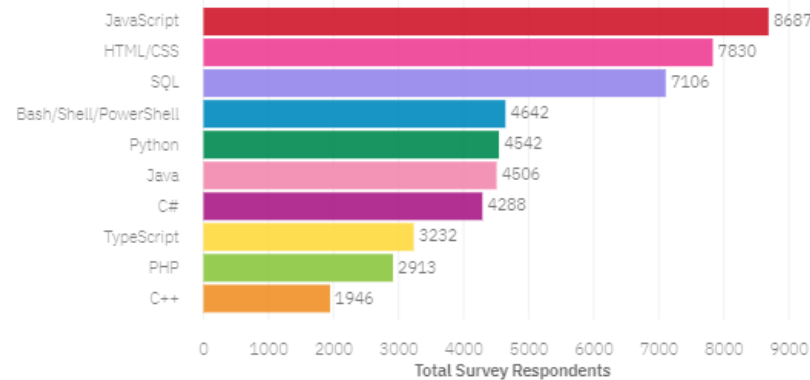

Link below provides interactive dashboards that represent IT technology trends in IBM Cognos Analytics environment:

<https://eu-gb.dataplatform.cloud.ibm.com/dashboards/872fb260-d105-40df-bff1-8d94c6c3268f/view/5800fd2a66e834f015b5bde407997a0e79332c55b4bb8155d18c7b495c352497a96146c0c8794f58d8145464a2ba145ccb>

# Current Technology Usage

# Demographics

Men vs Women Survey Respondent Proportion

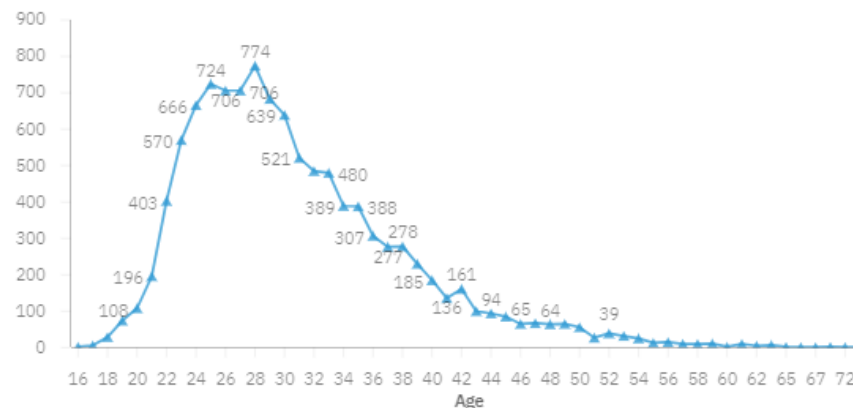

Gender  
● Woman ● Man

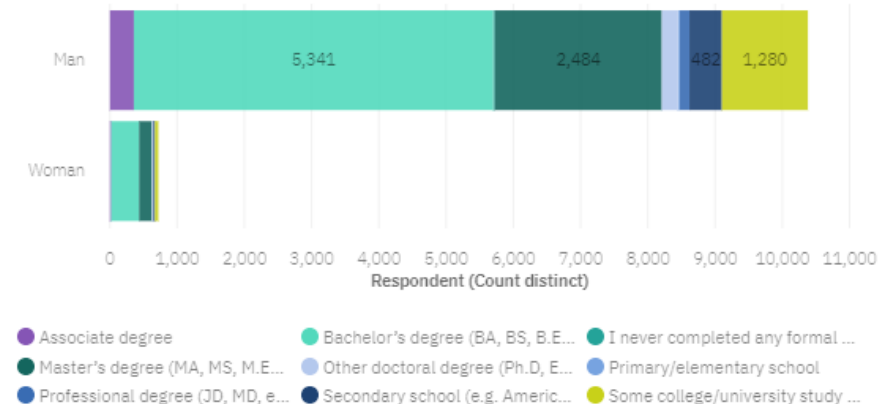

Worldwide Spread of Survey Respondents

Survey Respondent Count by Age

Survey Respondent Classification by Formal Education

# DISCUSSION

---

# OVERALL FINDINGS & IMPLICATIONS

---

## Findings

- A vast majority of IT specialists are young men, aged between 20 and 30 years old with either Bachelor's or Master's degree.
- A leading country by survey respondents is USA, followed by India, UK and Germany
- Docker is forecasted to overtake both Linux and Windows as the most popular platform next year

## Implications

- Boost in demand for web-based applications affects relevant trend changes in all IT technology layers
- India is increasingly becoming a new world's hub for IT specialists, whereas USA still dominates the field
- What remains unchanged, is that industry is still dominated by young male employees and JavaScript remains top programming language of a decade.

# CONCLUSION

---

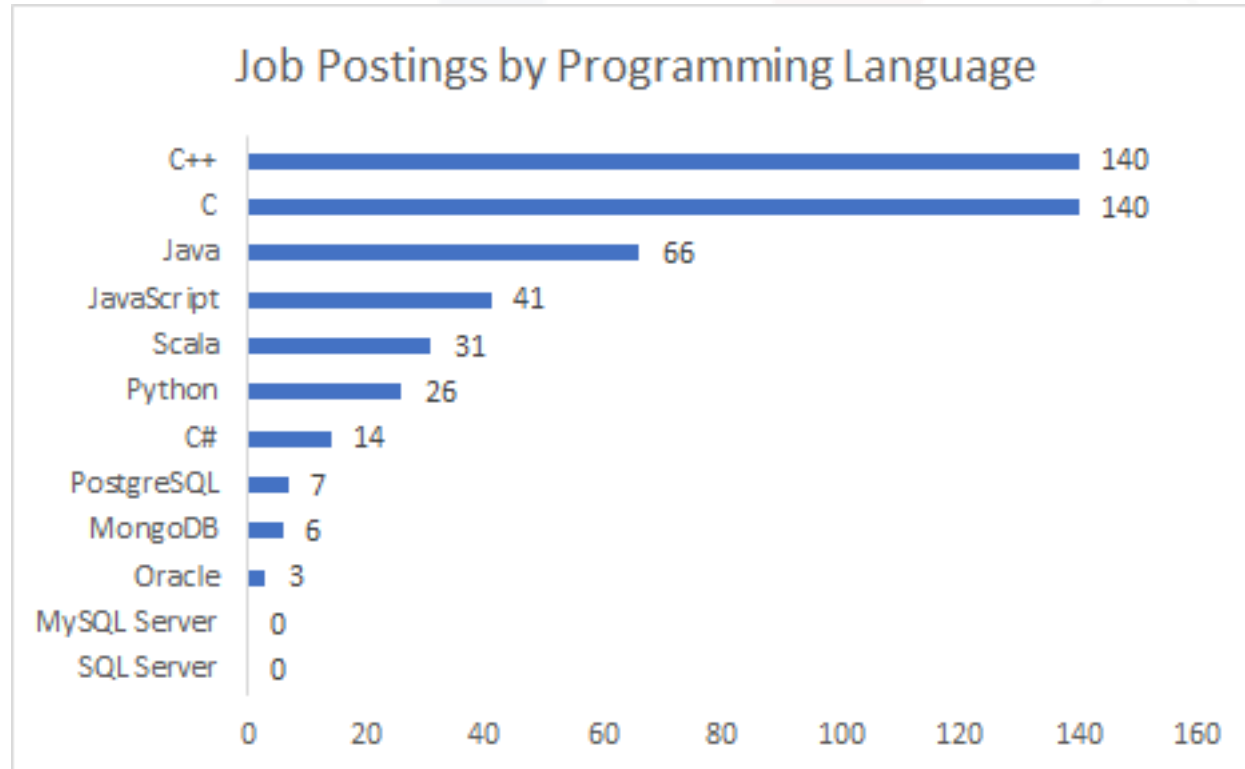

- IT developers are less likely to avoid learning JavaScript, which remains the most popular programming language
- Python has a great potential to become the most popular programming language in future
- Due to changing trends and diversification of technological requirements there is a growing need in mastering multiple programming languages in order to stay competitive in the job market
- NoSQL databases grow in popularity and marginally overtake it's SQL based competitors, however PostgreSQL is unlikely to give away its dominance very soon.
